1. This office action, in response to the response filed 11/17/2003, is a final office action.

Response to Arguments

2. Applicant's arguments filed 11/17/2003 have been fully considered but they are not persuasive. Applicant states Nokia does not disclose a segmentation indicator. However, Nokia determines if the receiver cannot decode a segment (frame) of the transmission. A segmentation indicator (frame number) is transmitted to the transmitter. Only those segments 9frames) that could not be decoded are retransmitted. This is the resegmenting step. The changing of the coding scheme is described in page 5, lines 17-33 as stated in the previous office action. In addition, Nokia describes the storing of received data in the receiver on page 11, line 26 to page 12, line 25. The amount of data in the reception buffer is monitored to control the flow of data on lines 26-35 of page 11. As stated in the previous office action, the mode of channel coding is changed if and when data is not received correctly. The transmitter can use a more efficient channel coding scheme for the connection to control the redundancy of the transmissions. The redundancy is necessary when errors occur causing redundant transmissions to be sent. When no errors are present, no redundant retransmissions are necessary. Resources of the system are monitored to allow the system to change to a more efficient mode. Page 5 states the number of channels may be increased so that a more efficient channel coding scheme may be taken into use without reducing the

nominal data rate (lines 30-33). For these reasons and the reasons stated in the previous office action, the rejections to the claims are maintained.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 2-4, 6, 8, 9, 12, 13 and 15-34 are rejected under 35 U.S.C. 102(b) as being anticipated by NOKIA TELECOMMUNICATIONS (WO 96/36146).

Regarding claims 9, 15, 17, 20, 22-25, 28, 29 and 33, Nokia discloses a method of transferring information between a transmitting entity and a receiving entity (figure 1). The coding scheme used in the system is known in the receiver and transmitter and transmission sent from each of these elements represent this fact (page 5, lines 17-33). Data is encoded in the transmitter and transmitted to a receiver (page 5, lines 17-33). If the receiver cannot decode a segment of the transmission, a segmentation indicator (frame number) is transmitted to the transmitter (page 2, lines 7-30). Upon receiving an indication that data was not properly received, the transmitter can use a more efficient channel coding scheme can be used for the connection (page 5, lines 17-33).

Retransmission of the data received in error is sent using this new channel coding scheme (page 2, lines 19-30). The received data is stored in the receiver to allow the data to be decoded.

Regarding claim 13, indication of the channel quality is sent to the transmitter (column 4, lines 3-21).

Regarding claim 16, the received data is decoded in the receiver.

Regarding claim 26, Nokia discloses retransmitting the data fewer times if the channel quality is sufficient (page 3, lines 9-14).

Regarding claim 27, Nokia discloses using a more efficient channel coding scheme to transmit and retransmit data free of errors (page 5, lines 17-33).

Regarding claims 2-4, 6, 8, 18, 19, 21, 30-32, 34, Nokia discloses using a more efficient coding scheme if the quality of the connection falls below a certain threshold (page 5, lines 17-33). The threshold is determined by the number of retransmission requests (page 5, lines 8-10).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
